

Algebraic Geometry II
Homework 9
Due Friday, April 10

- (1) Calculate the cohomology of $T\mathbb{P}^n(d)$ and $T^*\mathbb{P}^n(d)$. Hint: use the exact sequence from the previous homework.
- (2) Show that if A is a locally free sheaf, $A \otimes \cdot$ and $\mathcal{H}om(A, \cdot)$ are exact.
- (3) Calculate the cohomology of the structure sheaf of $\mathbb{A}^2 \setminus 0$.
- (4) On a projective scheme over a field, define $\chi(E) = \sum (-1)^i \dim H^i(E)$, which will be finite. Show that given a short exact sequence
$$0 \rightarrow A \rightarrow B \rightarrow C \rightarrow 0$$
we have $\chi(B) = \chi(A) + \chi(C)$.
- (5) Let X be a hypersurface in \mathbb{P}^n of degree d . Calculate $\chi(\mathcal{O}_X)$.
- (6) What is the Euler characteristic of a connected projective curve of genus g ?
- (7) Show that if Z is a complete intersection of two effective Cartier divisors D_1 and D_2 on X , we have an exact sequence
$$0 \rightarrow \mathcal{O}_X(-D_1 - D_2) \rightarrow \mathcal{O}_X(-D_1) \oplus \mathcal{O}_X(-D_2) \rightarrow \mathcal{O}_X \rightarrow \mathcal{O}_Z \rightarrow 0.$$
- (8) What is the genus of a smooth curve which is the intersection of a quadric and a cubic in \mathbb{P}^3 ?
